- Built-in Registrar and Proxy Server
- Supports up to 12 extensions
- Stackable up to 600 units
- Complete call management
- FAX Support

The A07-VES3302 are SIP extension servers for the Trunking Gateway. With built-in Registrar and Proxy Server; no other server is required. The A07-VES3302 line can be stacked up to 600 units, which is highly scalable for future upgrade. The extension server enables users to make calls between the SIP environment and IP PBX network, just like calls between extensions.
